Additive Manufacturing (AM) is one of the fastest growing areas in the market today. Industry, government and academic institutions are all working to consider or implement AM in their businesses and are looking to universities like CMU for individuals with the knowledge and experience to make that happen.

Attend our open house to learn about AM education options here in the College of Engineering. We have the only undergraduate minor in AM available anywhere, one of the only Master of Science (MS) programs in AM, and there are opportunities for PhD level research as well.

The open house starts at 4:30 pm but be sure to grab some pizza and take a seat by 4:45 pm. We'll provide an overview of what's happening here in AM, and share information about our AM degree programs, the core courses required and the variety of electives that allow you to customize the minor and MS to meet your specific interests. There will be opportunities to interact with students currently studying and conducting research in AM, and to learn about their successful job searches. You'll also have a chance to tour some of our lab spaces related to AM.

Registration is required so we can have enough pizza and can follow up with additional details.

Open to all interested CMU College of Engineering undergraduate students.
